SUMMARY

Data professional with 2+ years of experience building analytics pipelines, dashboards, and machine learning solutions for global enterprise clients, including Shiseido's Global Digital division. Proficient in Python, SQL, BigQuery, GA4, and Looker Studio, with hands-on experience spanning data engineering (GCP pipelines, Pub/Sub, data quality monitoring) and business-facing analytics (KPI dashboard design, stakeholder requirements gathering). Complemented by 5+ years in financial analysis, reconciliation, and credit management across Australia and Nepal, bringing strong business acumen and cross-functional communication to data-driven decision-making.

WORK EXPERIENCE

Data & Analytics Consultant | Amaris Consulting — Tokyo, Japan

Feb 2026 – Present

- Own end-to-end analytics delivery for Shiseido's Global Digital division, managing a global dashboard spanning e-commerce, competitive intelligence (SEMrush, Profitero), Google Analytics, and market-position data within strict SLA standards.
- Gather and translate evolving client requirements into new KPI-oriented dashboard sections and charts in Looker Studio, acting as the primary business analyst liaison for scope changes.

- Built a consolidated Looker Studio view benchmarking engagement metrics via GA4 across ~40 Shiseido regional website properties (.uk, .jp, .com, .ie, etc.), enabling the client to quickly compare markets and prioritize escalation decisions.
- Designed and built a proactive data monitoring dashboard in Looker Studio to track data availability, freshness, pipeline health, and API pull timeliness — filling a gap in data completeness checks that existed before the role.
- Write SQL in BigQuery to create and maintain views, tables, and data assertions supporting dashboard development, working alongside a data integration engineer on the team.
- Manage agile project workflows and cross-functional digital priorities using Jira and Confluence.

Data Scientist | Menteru Inc. — Tokyo, Japan

Oct 2024 – Jan 2026

- Architected modular Python data pipelines on GCP (Pub/Sub, BigQuery) to ingest and process IoT temperature and humidity sensor data every 15 minutes, applying feature engineering and normalization to prepare model-ready datasets.
- Built and hosted an interactive Streamlit dashboard in Python to visualize real-time sensor data, model predictions, and system performance for business stakeholders.
- Designed a Slack-integrated anomaly detection system via webhook, automatically flagging missing readings, extreme values, and stuck sensors to enable rapid response to data and equipment issues.
- Built an automated web scraping pipeline to extract and consolidate daily CSV data, feeding a scheduled forecasting job that predicted ambient air conditioning temperature 48 hours ahead on an hourly basis.
- Developed and optimized XGBoost models in Vertex AI to simulate HVAC performance, targeting improvements in energy efficiency and thermal comfort.

- Automated real-time device actuation via REST API integrations with building systems using serverless Cloud Functions, closing the loop between model output and physical control.

Accounting & Finance Roles

- Conducted financial analysis, budgeting, and reporting across healthcare and public sector organizations in Australia and Nepal.
- Reconciled large volumes of transactional data to identify trends, anomalies, and process improvements.
- Managed aged debt forecasting and credit evaluation across multi-client environments.

Organizations:

- LifeHealthCare | Accounts Receivable Team Lead — Sydney, Australia (*Jun 2023 – Mar 2024*)
- Allergan Aesthetics | Accounts Receivable Coordinator — Sydney, Australia (*Mar 2022 – Jun 2023*)
- Mastercare Australasia | National Credit Manager — Sydney, Australia (*Feb 2019 – Feb 2021*)
- Bajra Technologies | Account Manager — Kathmandu, Nepal (*Jun 2014 – Aug 2015*)

EDUCATION

- Data Science Bootcamp — Le Wagon, Tokyo, Japan (2024)
- Master of Accounting (CPA Extension) — Macquarie University, Sydney, Australia (2018)
- Bachelor of Business Management (BBM) — Christ University, Bangalore, India (2014)

TECHNICAL SKILLS

- **Languages & Tools:** Python (Pandas, NumPy, Scikit-learn), SQL, Jupyter, Git, REST APIs, Jira, Confluence.

- **Cloud & Data Infrastructure:** Google Cloud Platform (BigQuery, Cloud Functions, Pub/Sub, Dataflow, Vertex AI), Snowflake.
- **Data Engineering & ML:** Pipeline management, data health monitoring, SLA-driven pipeline reliability, data quality assurance, feature engineering, normalization, RAG (Retrieval-Augmented Generation), XGBoost, Random Forest, KNN, time-series forecasting, Model Evaluation (RMSE, R-square).
- **Visualization & Reporting:** Looker Studio, Streamlit, Plotly, Power BI, MS Excel.
- **Enterprise Systems:** SAP, Microsoft Dynamics Navision, MYOB, Quickbooks, Xero.

TECHNICAL PROJECTS

Resume Chatbot (AI & Full Stack Application)

- Developed an AI-driven agentic system using Retrieval-Augmented Generation (RAG) to automate information retrieval regarding professional experience.
- Tools: Python, Flask, FAISS, Cohere API, Groq API.
- Link: karushp.github.io/resume-chatbot

Expense Tracking & Receipt Management System

- Built an automated receipt processing and financial reporting tool featuring cloud storage and multi-platform data synchronization.
- Tools: Python, Streamlit, Supabase, Google Sheets API, OpenCV, ReportLab.

EMS Energy Consumption Dashboard

- Created an interactive Streamlit dashboard for analyzing regional energy consumption patterns across Japan.
- Tools: Python, Streamlit, Pandas, Plotly, Parquet.

Safety Helmet Detection (Computer Vision)

- Developed a real-time machine learning model to detect safety helmet compliance.
- Tools: YOLO, OpenCV, Streamlit, Python.

ADDITIONAL INFORMATION

- **Languages:** English (Fluent), Japanese (Learning), Nepali (Native), Hindi (Fluent)
- **Certifications:** Japanese Driver's License (普通自動車免許)
